

China Shengmu Sustainable Agriculture Commitment

As a creator of the desert full-process organic industrial chain and an advocate of organic agriculture, China Shengmu is committed to sustainable development. We solemnly pledge to take a series of actions within our business scope, as well as in cooperation with primary and non-primary suppliers, to protect the environment, maintain biodiversity, improve production efficiency, and ensure food safety, thereby promoting sustainable agriculture.

Respect for Ecosystems

Ecosystems are the foundation of agricultural development. Therefore, Shengmu solemnly pledges to respect natural ecosystems. Shengmu will strive to protect soil, water resources, and ecological landscapes, avoiding practices that negatively impact the environment such as over-cultivation, misuse of chemical pesticides, and fertilizers. Shengmu will take measures to protect and restore natural ecosystems around farmland, restore biodiversity, and achieve harmonious coexistence between agriculture and nature.

- **Implementing Pollution Reduction Plans:** Adopt environmentally friendly agricultural production techniques to reduce the use of fertilizers and pesticides and prevent agricultural non-point source pollution. Establish a waste management system to effectively treat and recycle waste, reducing environmental pollution.
- **Implementing Soil Health Protection Plans:** Implement soil protection and improvement plans, promote organic farming, and improve soil quality and ecosystem health. Strengthen soil monitoring and assessment, promptly identify and address soil pollution issues, and protect soil ecological functions.
- **Promoting Sustainable Management and Technology:** Adopt sustainable agricultural production technologies and management methods, including organic agriculture, ecological agriculture, and water-saving irrigation. Protect soil, water quality, and the ecological environment. Promote measures such as farmland cover, protective farming, and soil and water conservation to reduce soil erosion and water resource waste, achieving efficient, high-yield, and high-quality agricultural development.

Promoting Biodiversity

Biodiversity is a valuable treasure of life on Earth and an important foundation of agricultural production. Shengmu solemnly pledges to actively take measures to protect and promote biodiversity. Shengmu will preserve natural habitats, including wetlands, woodlands, and grasslands, creating suitable ecological environments to provide habitats for wildlife. We will plant diverse crops, adopt crop rotation and intercropping practices, reduce the risk of pests and diseases, and increase the stability and resilience of ecosystems.

- **Implementing Ecosystem Protection Plans:** Strengthen the protection and restoration of ecosystems, protect and increase biodiversity, and maintain agricultural ecological balance. Strictly control land development and utilization, avoid over-cultivation and deforestation, and protect the natural ecological environment.
- **Implementing Greenhouse Gas Emission Reduction Plans:** Take energy-saving and emission-reduction measures, promote the use of clean energy, and reduce greenhouse gas emissions in agricultural production processes. Conduct carbon emission accounting and management, set emission reduction targets and measures, and actively respond to the challenges of climate change.

Ensuring Food Safety

Food safety is vital to people's health and is the primary task of agricultural production. Shengmu solemnly pledges to ensure that the agricultural products we produce meet safety, hygiene, and quality standards. We will strictly comply with food safety regulations and standards, strengthen the supervision of agricultural product quality and risk assessment, promptly release food safety information, and protect consumers' health and rights. Furthermore, we will enhance hygiene management in the production and processing stages of agricultural products, improve the quality and safety of agricultural products, and ensure the safety of people's diets.

Advocating for Sustainable Consumption

Sustainable consumption is a key link in promoting sustainable agriculture and is the responsibility and obligation of everyone. Shengmu solemnly pledges to actively advocate for sustainable consumption concepts, guiding consumers to choose products from sustainable agricultural production. We will raise consumer awareness and trust in sustainable agricultural products through educational campaigns and marketing promotions, encouraging rational and green consumption, and collectively contributing to the promotion of sustainable agricultural development.

Shengmu solemnly pledges to take practical actions to fulfill the above commitments, continuously improving and refining our agricultural production and management practices, contributing to the sustainable development of agriculture.
